LAPORAN STRUKTUR DATA TUGAS UAS

Disusun Oleh:

Shandy Ilham Alamsyah (21091397015)

Kelas : A

Fakultas Vokasi PRODI D4 MANAJEMEN INFORMATIKA 2021 UNIVERSITAS NEGERI SURABAYA

Soal Nomor 1:

- Coding C++:

```
// Program C++ untuk merepresentasi undirected dan weighted graph Re bentuk adjacency List.
#include <br/>
```

- Hasil Run Program:

```
■ D\Shand\Kuliah\Semester 2\Struktur data\Dev-C++\coba adjacency (4).exe

1 → [2,5] → [4,3] → [3,1]
2 → [1,5] → [3,1] → [4,1]
3 → [2,1] → [1,3]
4 → [1,3] → [2,1]

Process exited after 0.0362 seconds with return value 0

Press any key to continue . . .
```

Soal Nomor 2:

Coding C++:

```
#include <iostream?
#include <conio.h>
int main(){
char kota1,kota2,kota3,kota4,kota5;
                              int jumlah,panjang, hasil1,hasil2,hasil3,hasil4,hasil5,hasil6,hasil7;
                           //input jumlah kota
cout<<"* Jumlah kota yang berada di kerajaan Britan : "<< endl;
                           cin>>jumlah;
                           //input nama kota
cout<<"Kota Pertama : ";
                           cin>>kota1;
cout<<"Kota Kedua : ";</pre>
                           cin>>kota2;
cout<<"Kota Ketiga : ";
                           cout<< Ko
cin>>kota3;
cout<< "Kota Keempat : ";
                            cin>>kota4;
cout<<"Kota kelima : ";</pre>
                           cin>>kota5;
                            cout<<endl:
                          //weekurust graph
//menampilkan graph yang terjadi
cout<<"* Sisi-sisinya adalah : "<<endl<<endl;
cout<<kotal<<kota2<<",";
cout<<kotal<<kota4<<",";</pre>
                           cout<<kota1<<kota5<<"
                           cout<<kota2<<kota3<<'
                           cout<<kota3<<kota5<<"
                            cout<<kota3<<kota4<<
                             cout<<kota4<<kota5<<end1<<end1;
                          //deklarasi edge
//menampilkan panjang jalan yang menghubungkan vertex
cout<<"* Panjang jalan antar kota : "<<end1;
cout<<"panjang "<<kotal<<" ke "<<kota2<< ": "; cin>> hasil1;
cout<<"panjang "<<kotal<<" ke "<<kota4<< ": "; cin>> hasil2;
cout<<"panjang "<<kotal<<" ke "<<kota5<< ": "; cin>> hasil3;
cout<<"panjang "<<kota2<<" ke "<<kota5<< ": "; cin>> hasil3;
cout<<"panjang "<<kota2<<" ke "<<kota5<< ": "; cin>> hasil4;
cout<<"panjang "<<kota3<<" ke "<<kota5<< ": "; cin>> hasil5;
cout<<"panjang "<<kota3<<" ke "<<kota5<< ": "; cin>> hasil6;
cout<<"panjang "<<kota4<<" ke "<<kota5<< ": "; cin>> hasil7;
                          //deklarasi adjacent
//menampilkan jalan yang menghubungkan kedua simpul (x,y,z)
cout<<"* seluruh jalan yang ada dalam kerajaan britan dan panjang jalannya : "<< endl;
cout<<"("<<kotal<<","<<kotal<<","<<hasill<<")";
cout<<"("<<kotal<<","<<kotal<<","<<hasill<<")";
cout<<"("<<kotal<<","<<kotal<<","<<hasill<<")";
